My first glimpse into geology

By Alvaro Figueroa

I love all of science. Specially astronomy and space relate stuff. I wanted to know more about Earth's geology and maybe later a bit of martial geology.

As all Smithsonian identification guide this one is just excellent. It's quite clear how to differentiate one mineral to the next, giving chemical composition, identification test, etc.

The only thing I would like added to it is a backcover or the periodic table of elements as a reference.

Oh, and one thing I loved. While identifying some mineral one of the test is to burn it and see if it give a bit of color to the flame. So green for Oxygen, purple for phosforus, etc. This are the same color you see when you watch a supernova, a comet, or the northern lights.

Cool

By Rudi

One of two field guides I purchased. They're my first and I'd say I'm very impressed. I don't know jack about rocks or minerals or gems or that there is a difference. I liked this book a lot because it adds the chemical composition and it's broken down very nicely. A little history, a little insight. Each page has a couple of different rocks on it with what it is along with a picture. Really nice little book.

Packed with info

By Jim

Got as an addition to a rock and mineral activity kit for my 8 year old grandson. He loves it and so do I.
