The Dividing Head is also known as book 6 from the best selling 7 book series, 'Build Your Own Metal Working Shop From Scrap'.

This project really proves the worth of a simple lathe fitted with only a face-plate and centers. You'll make some valuable accessories for the lathe and you'll be a better machinist when this one is done.

Now that you have a machine shop you need accessories and tooling. You also need practice on your new equipment so here's a book full of projects.

Build a four jaw chuck, a steady rest and other useful tooling. Build a worm-wheel dividing head and add change gears to the lathe so that you can cut accurate screw threads from 8 to 80 per inch, both right and left hand and internal and external. Make your own reamers and learn how the master machinist of 100 years ago made his handful of tools do any job he was assigned to do.

These are all items that many of us can't afford early in our shop careers, but you can make them yourself now that you have a machine shop.

a gem in the rough

By Travisji Corcoran

I've read all of the books in Gingery's series, and I give the same review to all of them:

An amazing testament to one man's creativity and hard work, and an inspiration to other budding machinists and tinkerers. The instructions are relatively easy to follow, but be aware that the production values (lay out, graphics, editing) are quite rough.

Good book, dividing head is a useful tool

By C. Toombs

This, like the remainder of the series, is a good book on building the particular items. It gives step by step detail on building the accessories and requires no specialized tools that you can't make yourself. It does use the some of the tools from the previous books, as the series is meant to be done in order. Probably the most useful item is the dividing head. If you have built the Gingery lathe, there are several useful items for that, including a four jaw chuck and change gears. As with the remainder of the Gingery books, it gives step by step details on both construction and techniques for building the mill, and gives you're mind some stimulation in the design and building departments. You can do a web search and find examples of these accessories built and operating. There is also a Yahoo Group devoted to the Gingery machines if you need

further inspiration.

Interesting and well written book. I would liked to have had a larger size book so that the drawings could have been larger for easier reading. Book had a lot of information on the uses.

David's writings are easy to comprehend and upto the task of building the Dividing Head and Accessories.
